Deflated size: 707 / 178cm 3 comfortable neoprene pads 8 EVA foam soft-grip handles with neoprene knuckle guards 1 air chamber 1 water drains, covered boston valve and buoyancy chamber Quick connector Rider capacity: 2 persons Type: Towables Style: 2 Person
2014 Jobe Storm Towable - Features
Water Drain All of our tubes have 1 or more water drains. A water drain ensures a good water release from the inside of the nylon cover. The less water inside the cover, the lighter the tube will stay. A lighter tube means less stress on the materials, better performance on the water, and lower fuel consumption.
2 Person Rider Capacity Every tube has a maximum amount of riders that is indicated on the product. Users should always respect this number in order to ensure each other's safety and lengthen the lifetime of the product.
300 PVC All of our inners are made from heavy duty PVC. The thickness of the PVC is specified in gauge (G). A higher number means thicker, heavier, and stronger PVC. We use 24G for our 1 person tubes, 28/30G for our 2/3 and 4 person tubes, and 34G for our commercially used rental tubes. Most of the tubes use a combination of different gauges to make the best product imaginable: Light where it is possible and strong where it is needed.
420D Nylon All of our covers are made from heavy-duty nylon. The thickness of the nylon is specified in denier (D). A higher number means thicker, heavier, and stronger nylon. We use 420D for our 1 person tubes, 840D for our 2/3 and 4 person tubes, and 1680D for our commercially used Heavy Duty tubes. Most tubes use a combination of different deniers to make the best product imaginable: Light where it is possible and strong where it is needed.

Inflatables: Jobe Storm 2 Person Inflatable 2022

6 Foam Filled Handles

All of our covered tubes have foam filled handles with neoprene knuckle guards. The handles are strong and comfortable, and the neoprene pads prevent your knuckles from being scratched.

Double Valve

A one-way valve with 2 caps. Screw off the top cap and the valve lets air in but no air out for easy inflation. Screw off the second cap for quick deflation.

Quick Connector

A quick connector buckle makes it super easy and fast to connect your tube to the towrope. It also comes in handy if you want to switch between different tubes.
